HOW IT BECAME PROTECTED

S’Albufereta was declared a Nature Reserve by virtue of Decree 121/2001 (BOIB Number 130, of 30 October 2001), and four years later it was reclassified as a Special Nature Reserve under Law 5/2005, of 26 May, on the Conservation of Environmentally Important Sites (locally known as the LEN). S’Albufereta Natural Resource Management Plan was also approved by means of the Government Council Resolution of 19 October 2001 (BOIB Number 130, of 30 October 2001). Yet the site had already been protected by legislation years earlier, thanks to its declaration as a Natural Area of Special Interest in 1991, by virtue of Law 1/1991, of 30 January, on Natural Spaces and Urban Regulation for Areas of Special Protection of the Balearic Islands (locally known as the LEN). S’Albufereta also forms part of the Natura 2000 Network, an initiative designed to contribute to the conservation of plant and animal species and their natural habitats in protected natural spaces around Europe.

Through Law 5/2005, of 26 May, on the Conservation of Environmentally Important Sites and for Areas of Special Protection of the Balearic Islands, S’Albufereta was declared a Nature Reserve. The following year (2001), by virtue of Decree 121/2001 (BOIB Number 130, of 30 October 2001), it was reclassified as a Special Nature Reserve. The government council approved the Natural Resource Management Plan of S’Albufereta in 1991, on natural spaces and urban regulation for areas of special protection of the Balearic Islands, which is why the site had already been protected by legislation years earlier.}

S’Albufereta abounds with plants that are typical of wetland areas with heavy saltwater influence, given the proximity to the sea. Thus, glasswort prairies and tamarisk groves are prevalent amid the Reserve’s lagoons, streams and canals. In fact, the tamarisk forest that lines the El Rec stream is one of the most noteworthy communities of its type in Mallorca. No less striking for their unique hydrogeological features are the varying surges of the saltwater springs known as Els Ulls del Rec, which emerge in the streambed itself.

The presence of the endemic plant Limonium alcudianum, which only grows in the brackish waters of S’Albufereta and the neighbouring Alcúdia, as well as the only Balearic community of another type of statice, the Limonium algarvense, along with many other species, make this an exceptional site of botanical interest.

RULES AND RECOMMENDATIONS

Visitors are invited to use the itineraries marked on this pamphlet, which offer a view of the area’s most prominent values without damaging the natural environment or disturbing the species that inhabit it and avoiding possible conflicts with private property. Organized groups wishing to visit the Reserve are asked to make arrangements in advance.

The Reserve can be accessed by boat, on horseback or in motorised vehicles. Please do not engage in sports or competitive activities in the Nature Reserve. Construction activities of any type require a permit.

The collection or removal of plants is not allowed. The use of motorised vehicles is restricted to the nearest urban area, and pets, like S'Albufereta's residents, are asked to make arrangements in advance.

Please do not disturb the animals. The Reserve is a home and a breeding ground for many bird species. Moreover, during the harsh summer droughts that typify the Mediterranean climate, wetlands become genuine oases for many bird species, such as Eleonora’s falcons, as they hunt in the late afternoon or catching a fortunate glimpse of an osprey (Pandion haliaetus) are just some of the pleasant rewards to be enjoyed by the attentive and quiet visitor.

Visitors are not allowed to enter the Nature Reserve by boat, on horseback or in motorised vehicles.

Please keep the environment clean. Be sure to take with you any waste that you generate during your visit.

Dogs and cats can damage unique habitats that typify the Mediterranean climate, wetlands and their ornithological and botanical value. Their natural habitats in protected natural spaces around Europe.

Additionally, certain land use and activities are regulated to prevent unwanted environmental impact.

The Nature Reserve covers a surface of 211 hectares, with additional peripheral protection of its surrounding 290 hectares, where many bird species. Like other Mediterranean wetlands, S’Albufereta is an essential sanctuary along the annual migratory paths of countless aquatic birds. Moreover, during the harsh summer droughts that typify the Mediterranean climate, wetlands like S’Albufereta become genuine oases for many bird species.

Watching a group of Eleonora’s falcons (Falco eleonorae) as they hunt in the late afternoon or catching a fortunate glimpse of an osprey (Pandion haliaetus) are just some of the pleasant rewards to be enjoyed by the attentive and quiet visitor.
